

Universidade de Brasília – UnB

Departamento de Ciência da Computação - CIC

Estruturas de Dados, Turma E, 1/2014

Prof. Díbio

P = Projetos; E = Exames Escritos, MP = Média Projetos; MF = Média Final

Do Plano de Ensino...

Serão computadas duas (02) médias parciais, MExames, MProjetos.

$MExames = (1,25 \times E_{maior} + 1,0 \times E_{meio} + 0,75 \times E_{menor})/3$

$MProjetos = (Pr1 + Pr2 + Pr3 + Pr4 + Pr5 + Pr6)/6$

Para aprovação o(a) aluno(a) deverá obter MExames E MProjetos maiores (ambas), ou iguais, a 5,0.

A média final MFinal será computada como:

(para o caso do(a) aluno(a) ter obtido MExames E MProjetos $\geq 5,0$):

$MFinal = 0,75(MExames) + 0,25(MProjetos)$

(para o caso do(a) aluno(a) ter obtido MExames OU MProjetos $< 5,0$):

MFinal = menor valor entre (MExames e MProjetos)
